In this slide, some important text will be **highlighted** with JHU color because it's important. Please, don't **abuse** it.

### Remark

Sample text

### Important theorem

Sample text in the red box

### Examples

Sample text in the green box. The title of the block is "Examples".

# Enumerate and itemize test

## Third project

References

### Enumerate environment with classic colors

- 1 Hello, this is the **first** point
- 2 This is my **second** point

### Itemize environment with JHU colors

- This is a separate **itemize** test
- Second point for the **separate** test

Integration is also known as anti-derivative which represents the area under the curve. For indefinite integral, we should add a constant  $C$  to the anti-derivative expressions.

$$\int \exp(x) \, dx = \exp(x) + C$$

You can **boldface colors** to emphasize even more<sup>1</sup>.

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special contents, but the length of words should match the language.<sup>3</sup>
